Set up domain authentication

To improve your sender reputation and deliverability, we strongly recommend that you set up a few DNS records.
This will allow us to sign outgoing email using DKIM and DomainKeys, and will inform your contacts' email providers that we are allowed to send your emails

Set up SPF

An SPF record lists all servers that are allowed to send emails from your domain.

We detected that your domain has an existing SPF record but it does not allow us yet.

All you have to do is add:

    include:spf.mailjet.com

Your updated SPF record should look like this:

    jobfairub.com

IN TXT

    v=spf1 include:spf.mailjet.com a mx ip4:103.41.205.181 ~all

> What's the meaning of SPF (Sender Policy Framework)? (/support/what-s-the-meaning-of-spf-sender-policy-framework,20.htm)

User Guide

OVH.COM (https://documentation.mailjet.com/hc/en-us/articles/360044087593-SPF-DKIM-Records-Setup-For-OVH)

1&1 (https://documentation.mailjet.com/hc/en-us/articles/360044083493-SPF-DKIM-Records-Setup-For-IONOS)

GoDaddy (https://documentation.mailjet.com/hc/en-us/articles/360044083553-SPF-DKIM-Records-Setup-For-Go-Daddy-)

DreamHost (https://documentation.mailjet.com/hc/en-us/articles/360044083733-SPF-DKIM-Records-Setup-Fo-Dreamhost)

Set up DomainKeys/DKIM

This record contains a public key, used by receivers to check email really comes from an authorized sender.

There seems to be an error with your DomainKey record.

Here is your public key and how your DomainKey record should look like:

    mailjet._domainkey.jobfairub.com.

IN TXT

    k=rsa; p=MIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQKBgQCxi3tT0fthFjtvmR1m

Please make sure it stays on one line!

Here is the current value, according to (authoritative nameserver for your domain).

    mailjet._domainkey.jobfairub.com.

IN TXT

We will check this record on a regular basis to avoid any signature error.

> What's the meaning of DKIM? (/support/what-s-the-meaning-of-dkim,16.htm)

FORCE REFRESH (/ACCOUNT/SENDER/DOMAIN_INFO/JOBFAIRUB.COM?REFRESH=1)   BACK TO DOMAINS (/ACCOUNT/DOMAIN)
